## I-cache Miss Ratio by Sets vs Associativity

|          | 1-way  | 2-way  | 4-way  | 8-way  |
|----------|--------|--------|--------|--------|
| 16 sets  | 0.4388 | 0.4179 | 0.3635 | 0.2971 |
| 32 sets  | 0.4134 | 0.3695 | 0.2941 | 0.1997 |
| 64 sets  | 0.3732 | 0.2986 | 0.2313 | 0.1627 |
| 128 sets | 0.3155 | 0.2321 | 0.1615 | 0.0851 |
| 256 sets | 0.253  | 0.1699 | 0.086  | 0.0177 |
| 512 sets | 0.1816 | 0.0948 | 0.031  | 0.0154 |

## D-cache Miss Ratio by Sets vs Associativity

|          | 1-way  | 2-way  | 4-way  | 8-way  |
|----------|--------|--------|--------|--------|
| 16 sets  | 0.1925 | 0.0813 | 0.0504 | 0.0249 |
| 32 sets  | 0.1359 | 0.0568 | 0.029  | 0.0226 |
| 64 sets  | 0.0761 | 0.0336 | 0.023  | 0.0223 |
| 128 sets | 0.0491 | 0.0273 | 0.0224 | 0.0216 |
| 256 sets | 0.0342 | 0.0239 | 0.0216 | 0.0215 |
| 512 sets | 0.0256 | 0.0218 | 0.0215 | 0.0215 |

a) For a given number of sets, what effect does increasing associativity have on the miss ratio?

Increasing associativity tends to decrease the miss ratio for any given set size.

b) For a given associativity, what is the effect of increasing the number of sets?

A larger set size shows a smaller miss ratio for any given associativity.

c) For a given cache size, how does the miss ratio change when going from an associativity of one to two to four? Explain.

For a given cache size, increasing associativity tends to show a minor decrease in miss ratio from 1-way to 2-way associativity. However, there is a minor *increase* in miss ratio from 2-way to 4-way associativity for many (but not all) cases.

d) If you were to design an Instruction cache, limited to a total cache size of 4 Kbytes, which cache organization would you choose, based solely on performance?

Based off of the results and assuming a fixed block size of 16 bytes as was the case in testing, maximum performance can be obtained using 32 sets and 8-way associativity.

e) If you were to design a data cache, limited to a total cache size of 4 Kbytes, which cache organization would you choose, based solely on performance?

Based off of the results and assuming a fixed block size of 16 bytes as was the case in testing, maximum performance can be obtained using 32 sets and 8-way associativity.

| Sets / Assoc | I-Cache Miss<br>No. (N/2<br>sets) | D-Cache<br>Miss No. (N/2<br>sets) | Total<br>Accesses | Effective<br>Combined<br>Cache Miss<br>Rate | Unified<br>Cache Miss<br>Rate |
|--------------|-----------------------------------|-----------------------------------|-------------------|---|-------------------------------|
| 128 / 1      | 70679                             | 3668                              | 237599            | 0.3130                                      | 0.2996                        |
| 128 / 2      | 56547                             | 1620                              | 237599            | 0.2448                                      | 0.2131                        |
| 128 / 4      | 43815                             | 1109                              | 237599            | 0.1891                                      | 0.1474                        |
| 2048 / 1     | 21674                             | 1069                              | 237599            | 0.0957                                      | 0.0511                        |
| 2048 / 2     | 6501                              | 1035                              | 237599            | 0.0317                                      | 0.0189                        |
| 2048 / 4     | 2909                              | 1035                              | 237599            | 0.0166                                      | 0.0166                        |

## Note:

I ran split-cache with the following:

./sim-cache -cache:il1 i11:\$sets:16:\$assoc:l -cache:dl1 d11:\$sets:16:\$assoc:l -cache:il2 none -cache:dl2 none -tlb:itlb none -tlb:dtlb none tests-pisa/bin.little/test-math

I ran unified-cache with the following:

./sim-cache -cache:il1 dl1 -cache:dl1 d11:\$sets:16:\$assoc:I -cache:il2 none -cache:dl2 none -tlb:itlb none -tlb:dtlb none tests-pisa/bin.little/test-math
